Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahajbhadja sahaj-bhadja

Summary

Software engineer with 2+ years building **full-stack cloud services**, **inventory/data workflows**, and **reliable CI/CD pipelines** using Angular/React-style UIs, backend APIs, SQL databases, and event-driven messaging patterns.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

Experience

USC Dornsife **LA, California**
Software Engineer *September 2025 - Present*

- Built **data-intensive services and interfaces** for 500+ users, reducing query latency from **1.2s to 350ms** via SQL tuning, API optimization, and structured monitoring practices.
- Implemented **fault-tolerant orchestration and validation** for 5K+ monthly jobs, improving reliability and incident resolution across distributed processing and business-critical workflows.

Grad8 **LA, California**
Software Engineer Intern *June 2025 - August 2025*

- Developed **full-stack merchandising-style features** handling 10K+ daily requests using React/Flask, translating requirements into reusable UI components and secure backend APIs.
- Improved **release automation and defect triage** with CI/CD checks, reducing turnaround by **60%** while maintaining delivery quality in rapid iterative deployments.

USC AD Labs **Los Angeles, CA**
ML Research Assistant *January 2025 - May 2025*

- Built **high-volume analytics pipelines** over 100K+ trajectories, enabling reproducible evaluations and rapid fault diagnosis across complex, data-heavy decision workflows.
- Produced **technical diagnostics and implementation notes** that improved collaboration between engineering and research teams, reducing ambiguity during feature planning and rollout.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 - July 2024*

- Engineered **API and ETL backend services** with Python/Java, AWS Glue, and S3, improving response time by **30%** and strengthening enterprise data integration reliability.
- Maintained **20+ automated test suites** with Jenkins, PyTest, and Mockito, improving pipeline efficiency by **68%** and reducing recurring defects in production release cycles.

Aasma Technology Solutions **India**
Full Stack Developer Intern - (VibrantChem) *May 2023 - August 2023*

- Implemented **MERN + WebSocket modules** supporting eight workflows and 2M+ synchronized records, improving operational consistency and throughput for user-facing transaction flows.
- Automated **Docker/Jenkins deployments**, reducing release time by **50%** with standardized build, validation, and rollback-ready deployment patterns across environments.

Skills

Languages: **Python**, Java, JavaScript/TypeScript, SQL, C++, Bash
Frontend: Angular/React component development, AgGrid-style data tables, HTML5, CSS3
Backend: .NET Core/Spring/Flask-style APIs, REST services, RabbitMQ messaging patterns, MassTransit concepts
Cloud & Data: Azure SQL/AWS RDS, containerized deployment, Kubernetes (AKS concepts), CI/CD with Jenkins/GitHub Actions
Engineering: system integration, troubleshooting, QA automation, documentation, Agile collaboration

Projects

Inventory Insights Dashboard | *TypeScript, React, SQL, RabbitMQ*

- Built a **near-real-time inventory analytics dashboard** with event-driven updates and trend views, improving stock visibility and purchase-planning decision speed across multiple workflows.

FinNexus Live | *Next.js, TypeScript, Kubernetes, MongoDB*

- Developed a **cloud-native transaction platform** supporting 50K+ users and 1M+ transactions, emphasizing secure APIs, scalable deployment, and reliable end-to-end processing.

Linguistix Code | *Python, AWS, Docker, CI/CD*

- Implemented a **containerized processing API** with automated CI/CD and validation on AWS, improving reliability and operational continuity for high-volume production pipelines.
