Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahajbhadja sahaj-bhadja

Summary

Enterprise software engineer with 2+ years building **Java/Spring, microservices, distributed systems, relational data models, ETL pipelines, and cloud-native applications** using PostgreSQL, Linux, Docker, Python, Jenkins, and Agile DevOps.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*

Experience

USC Dornsife **LA, California**
Software Engineer *September 2025 – Present*

- Designed a multi-tenant PostgreSQL data model supporting 10,000+ structured records, implementing SQL transformations, validation, indexing, and query tuning while reducing enterprise workflow latency 35% across production systems.
- Built fault-tolerant distributed services using FastAPI workers, explicit state transitions, background processing, and failure isolation, processing 1,000+ concurrent jobs while increasing throughput 3x without cascading task failures.

Grad8 **LA, California**
Software Engineer Intern *June 2025 – August 2025*

- Developed scalable RESTful APIs and React services on AWS, consistently handling 10,000+ daily requests while using concurrent processing, timeout handling, fallback patterns, and monitoring for production reliability.
- Automated Python workflows for structured and semi-structured PDF, DOCX, ZIP, text, and image data, processing 1,000+ files per batch with secure ingestion and fault-tolerant execution at scale.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 – July 2024*

- Developed Java and Python microservices from requirements through deployment, integrating AWS Glue and S3 ETL pipelines while improving API response times 30% and overall pipeline efficiency 68%.
- Maintained Jenkins CI/CD and automated testing across Linux, Windows, and macOS, executing 20+ unit and integration suites while collaborating with Microsoft and GitHub stakeholders in Agile sprints.

Aasma Technology Solutions **India**
Full Stack Developer Intern - (VibrantChem) *May 2023 – August 2023*

- Designed eight cloud-native microservices for authentication, customer data, billing, permissions, and analytics using Node.js, REST APIs, Docker, and Azure SQL, synchronizing two million structured records at scale.
- Implemented React interfaces with monitored deployment pipelines using Jenkins, Sentry, Azure Monitor, Kibana, and automated tests, achieving 95%+ build validation and reducing deployment time 50% across release environments.

LST Capitals **India**
Web Developer Intern *November 2022 – January 2023*

- Developed Spring Boot and Flask APIs for booking, payment, pricing, and eligibility workflows, supporting 50,000+ relational records with sub-200-millisecond responses and real-time Firebase synchronization at production scale.
- Designed end-to-end architecture with 12+ integration points and automated payment events through idempotent webhooks, improving cross-platform compatibility 15% and streamlining project delivery 22% across distributed application workflows.

Skills

Enterprise: Java, Spring, Spring Boot, Angular.js, Python, SQL, RESTful APIs, microservices
Data: PostgreSQL, SQL Server, MySQL, relational modeling, structured data, semi-structured data, ETL
Systems: Distributed systems, fault tolerance, timeouts, caching, Linux, middleware, Docker, Kubernetes
DevOps: Jenkins, CI/CD, GitHub Actions, Git, Agile/Scrum, automated testing, deployment automation
Observability: Grafana, Splunk, Azure Monitor, Sentry, monitoring, performance analysis, debugging

Projects

Chat2SQL Code | *Java, PostgreSQL, Enterprise Data*

- Built a Java and TypeScript enterprise data workspace supporting 10+ relational and NoSQL databases, implementing schema synchronization, query validation, Docker deployment, and reliable cross-platform Linux debugging workflows.

Big-Brain Live | *Data Modeling, Search, PostgreSQL*

- Engineered a cloud data ingestion and indexing system processing 50,000+ records with PostgreSQL, FAISS, and Pinecone, implementing incremental updates and performance tuning that reduced retrieval latency 40%.

Linguistix | *Python Automation, Docker, CI/CD*

- Developed a containerized Python REST API on AWS CodePipeline and ECS Fargate with automated CI/CD releases and validation checks, achieving 87% measured accuracy and production-grade reliability at scale.
