# Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahajbhadja sahaj-bhadja

## Summary

Backend software engineer experienced in **Java, Spring Boot, Python, AWS, REST APIs, microservices, Docker, Kubernetes, SQL, CI/CD, and production support**, building scalable cloud-native services for operational workflows.

## Education

**University of Southern California, Los Angeles, CA** **August 2024 – May 2026**
*Master of Science in Computer Science* *GPA: 3.75/4*
**Coursework:** Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

**Pandit Deendayal Energy University, Gandhinagar, India** **November 2020 – May 2024**
*Bachelor of Technology in Computer Science and Engineering* *GPA: 3.88/4*
**Coursework:** Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

## Experience

**USC Dornsife** **LA, California**
*Software Engineer* *September 2025 – Present*
- Built FastAPI services processing 5,000+ monthly jobs with explicit state transitions, failure isolation, validation, and reconciliation, increasing concurrent throughput 3x while reliably achieving 99%+ reliability in production environments.
- Designed multi-tenant SQL storage with indexing and caching for 500+ users, reducing dashboard latency from 1.2 seconds to 350 milliseconds through query optimization and access-pattern tuning at scale.

**Grad8** **LA, California**
*Software Engineer Intern* *June 2025 – August 2025*
- Shipped AWS-backed REST APIs serving 150+ instructors and 10,000+ daily requests, adding CI/CD, automated tests, diagnostics, and configuration updates while reliably reducing feedback turnaround time 60% at scale.
- Investigated production ingestion, OCR, model, and API failures, implementing fallback paths and clearly documented fixes that reliably maintained stable peak-load performance across customer-facing workflows at production scale.

**Aasma Technology Solutions** **India**
*Software Developer Engineer - (SecureSync)* *August 2023 – July 2024*
- Developed Java and Python microservices with REST APIs, JSON, AWS Glue, S3, SQL, and Docker, improving response times 30%, reducing payload sizes 25%, and lowering storage costs 15%.
- Owned requirements-through-deployment improvements, automating 20+ unit and integration tests plus Jenkins CI/CD across Linux, Windows, and macOS while increasing pipeline efficiency 68% during Agile reviews at scale.

**Aasma Technology Solutions** **India**
*Full Stack Developer Intern - (VibrantChem)* *May 2023 – August 2023*
- Built eight REST microservices for resource allocation, customer records, billing, and notifications, reliably synchronizing two million records through WebSockets, Azure SQL, Docker, and Jenkins-based production releases at scale.
- Automated testing and Docker deployments through Jenkins, reducing release time 50% while using Sentry, Azure Monitor, and Kibana to improve reliability across production support cycles at scale.

**LST Capitals** **India**
*Web Developer Intern* *November 2022 – January 2023*
- Reviewed requirements, mapped 12+ integration points, and presented architecture to the client before implementing Spring Boot, Flask, REST APIs, booking, payment, and real-time status workflows for customers at scale.
- Built and troubleshot APIs across 50,000+ records, delivering sub-200-millisecond responses and reducing manual refund handling 70% through webhook-driven production support for customer-facing booking and payment workflows at scale.

## Skills

**Languages**: Java, Python, JavaScript, TypeScript, SQL, HTML, CSS, Shell
**Backend**: Spring Boot, REST APIs, microservices, JSON, XML, OOP, FastAPI, Flask, Node.js
**Cloud/Data**: AWS, Azure, GCP, Docker, Kubernetes, PostgreSQL, Oracle, SQL Server, MongoDB, Redis
**Delivery**: Git, CI/CD, Jenkins, Agile, Scrum, unit testing, integration testing, monitoring, production support

## Projects

**Chat2SQL** Code | *Java, Oracle, REST APIs*
- Developed Java and TypeScript services supporting 10+ databases including Oracle, PostgreSQL, and SQL Server, configuring Docker workflows with schema synchronization, query validation, and reliable cross-platform deployment at scale.

**FinNexus** Live | *Cloud-Native Microservices*
- Built a Kubernetes-deployed platform supporting 50,000+ users and one million transactions using REST APIs, MongoDB, WebSockets, token controls, and CI/CD automation for reliable high-volume operational delivery at scale.

**HMIS - Hospital Management Information System** Live | *Production Monitoring*
- Implemented TypeScript workflows for appointments, notifications, and record access, adding Sentry monitoring and structured schemas while reliably reducing retrieval time 50% and administrative workload 30% for operational teams.
