Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahaj-bhadja sahaj-bhadja

Summary

Software engineer with 2+ years building and maintaining web applications, SQL-backed services, and API integrations across production environments. Strong in debugging, legacy code navigation, relational databases, client-facing communication, and reliable delivery across multiple concurrent projects.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

Experience

USC Dornsife **Los Angeles, CA**
Software Engineer *September 2025 – Present*

- Maintained SQL-backed platform services for 500+ users, tuning indexed queries, background workers, and validation flows across FastAPI workflows to improve dashboard latency from 1.2 seconds to 350 milliseconds.
- Troubleshot issues across development and production workflows, translating stakeholder requests into maintainable backend changes while documenting debugging paths that made recurring platform issues faster to isolate and resolve.
- Supported concurrent releases, data fixes, and integration updates across multiple requests at once, balancing reliability, delivery speed, and communication with internal stakeholders during recurring production support cycles.
- Worked within an established platform codebase and evolving requirements, independently implementing defined backend fixes while coordinating with teammates to keep user-facing workflows stable across repeated operational requests.
- Supported high-volume application workflows and backend integrations, strengthening asynchronous processing, issue triage, and release stability while adapting quickly to shifting priorities across overlapping implementation requests daily effectively.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 – July 2024*

- Engineered API and ETL integrations using Python, SQL, AWS Glue, and S3, improving response time by 30% while supporting scalable service integrations, data collection workflows, and maintainable backend components.
- Maintained 20+ automated tests and CI pipelines with Jenkins, PyTest, and Mockito, increasing release reliability by 68% and strengthening debugging discipline across validation checks, deployments, and multi-environment builds.
- Worked within an existing microservice codebase spanning multiple operating systems, supporting executable builds, nightly validation runs, and cross-environment troubleshooting for production-style workflows with strict reliability and uptime expectations.
- Collaborated across multiple workstreams in a fast-paced delivery environment, clarifying requirements, resolving defects, and supporting maintainable integrations while adapting quickly to shifting priorities across shared client-facing systems.
- Balanced delivery across parallel tasks and environments, coordinating fixes, validation, and deployment support so shared application changes stayed consistent while multiple stakeholders depended on the same underlying systems.

Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C++, Bash
Web & Application Dev: React, Next.js, HTML5, CSS3, TailwindCSS, Flask, FastAPI, Node.js, Express, REST APIs, WebSockets
Data & Databases: PostgreSQL, MySQL, MongoDB, SQL Server, Azure SQL, relational modeling, query tuning, indexing, ETL pipelines
Tooling & Delivery: Git, GitHub Actions, Jenkins, Docker, CI/CD, PyTest, Mockito, Visual Studio familiarity, source control workflows
Engineering: debugging, legacy code maintenance, production support, API integration, unit testing, Agile/Scrum, stakeholder communication, client-facing collaboration

Projects

HMIS Live | *MERN, TypeScript, ABDM APIs, Twilio, Sentry*

- Built a healthcare workflow platform with TypeScript, MERN, ABDM APIs, Twilio alerts, and Sentry monitoring, reducing administrative workload by 30% through responsive scheduling, consent-aware access, and operational dashboards.

Chat2SQL Code | *Java, TypeScript, SQL, Docker, Maven*

- Built an AI-powered SQL workspace across Java and TypeScript services, supporting 10+ databases and accelerating query authoring, schema exploration, and validation through a unified developer interface and local workflows.

Linguistix | *Python, AWS, Docker, CI/CD*

- Developed a containerized Python REST API on AWS with automated CI/CD, validation checks, and reproducible releases, achieving 87% classification accuracy while supporting reliable data-processing workflows in production-style environments.
