Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahaj-bhadja sahaj-bhadja

Summary

Software engineer with 2+ years building web applications, REST APIs, SQL-backed services, and operational tooling across production environments. Strong in integrations, debugging, relational databases, CI/CD, and maintainable solutions for complex workflows.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

Experience

USC Dornsife **Los Angeles, CA**
Software Engineer *September 2025 – Present*
- Maintained SQL-backed platform services for 500+ users, tuning indexed queries, background workers, and validation flows across FastAPI workflows to improve dashboard latency from 1.2 seconds to 350 milliseconds.
- Supported recurring integration updates, data fixes, and release workflows, translating stakeholder requests into maintainable backend changes while documenting debugging paths that made production issues faster to isolate and resolve.
- Worked across application, data, and storage layers, supporting operational visibility and stable platform behavior while balancing multiple requests, backend enhancements, and production support tasks at once daily.
- Supported synchronized workflows across shared application components, backend services, and operational requests, improving maintainability while coordinating fixes, releases, and environment-specific debugging work across overlapping operational priorities daily.
- Handled fast-moving implementation requests across shared web application workflows, supporting reliable feature updates and environment-specific fixes while keeping operational behavior stable for internal users and stakeholders consistently.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 – July 2024*
- Engineered API and ETL integrations using Python, SQL, AWS Glue, and S3, improving response time by 30% while supporting scalable service integrations, data collection workflows, and maintainable backend components.
- Maintained 20+ automated tests and CI pipelines with Jenkins, PyTest, and Mockito, increasing release reliability by 68% and strengthening debugging discipline across validation checks, deployments, and multi-environment builds.
- Worked within an existing microservice codebase spanning multiple operating systems, supporting executable builds, nightly validation runs, and cross-environment troubleshooting for production-style workflows with strict reliability and uptime expectations.
- Collaborated across parallel workstreams to clarify requirements, resolve defects, and support maintainable integrations while adapting quickly to shifting priorities across shared client-facing and internal business systems daily.
- Supported integration points between services, databases, and automated workflows, improving operational consistency while balancing defect fixes, validation, and delivery needs across multiple overlapping implementation efforts daily effectively.

Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C++, Bash
Web & Frontend: React, Angular.js, HTML5, CSS3, TailwindCSS, responsive design, JavaScript UI development
Backend & APIs: Flask, FastAPI, Node.js, Express, REST APIs, WebSockets, JSON, API integration, microservices
Data & Microsoft-Adjacent: PostgreSQL, MySQL, MongoDB, SQL Server, Azure SQL, relational modeling, query tuning, indexing, Visual Studio familiarity
Cloud & Delivery: AWS, Azure, Docker, Jenkins, Git, GitHub Actions, CI/CD, unit testing, debugging, Agile/Scrum, stakeholder communication

Projects

HMIS Live | *MERN, TypeScript, ABDM APIs, Twilio, Sentry*
- Built a healthcare workflow platform with TypeScript, MERN, ABDM APIs, Twilio alerts, and Sentry monitoring, reducing administrative workload by 30% through responsive scheduling, consent-aware access, and operational dashboards.

Chat2SQL Code | *Java, TypeScript, SQL, Docker, Maven*
- Built an AI-powered SQL workspace across Java and TypeScript services, supporting 10+ databases and accelerating query authoring, schema exploration, and validation through a unified developer interface and local workflows.

Linguistix | *Python, AWS, Docker, CI/CD*
- Developed a containerized Python REST API on AWS with automated CI/CD, validation checks, and reproducible releases, achieving 87% classification accuracy while supporting reliable data-processing workflows in production-style environments.
