Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahaj-bhadja sahaj-bhadja

Summary

Software engineer with 2+ years building full-stack applications, backend services, and testing workflows. Strong in Python, JavaScript/TypeScript, React-style UI, Linux, CI/CD, and production debugging.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

Experience

Grad8 **Los Angeles, CA**
Software Engineer Intern *June 2025 – August 2025*
- Developed React interfaces and Flask APIs for an AI grading product handling 10,000+ daily requests, integrating uploads, grading history, and secure file-processing workflows across customer-facing operational surfaces.
- Integrated multimodal services, concurrent batch processing, and backend workflows on AWS, reducing feedback turnaround by 60% while maintaining stable APIs, dependable execution, and consistent behavior under peak usage.
- Worked across frontend state, backend logic, and testing workflows to ship polished features quickly, debug issues early, and incorporate collaborative code-review feedback throughout fast release cycles consistently.

Aasma Technology Solutions **India**
Full Stack Developer Intern - (VibrantChem) *May 2023 – August 2023*
- Built MERN platform features with REST APIs, WebSockets, and responsive interfaces, supporting synchronized records across modular workflows while translating requirements into reliable end-to-end behavior for customer-facing applications.
- Automated Docker-based build and test workflows with Jenkins, cutting release time by 50% while improving deployment consistency, troubleshooting discipline, and shared engineering practices across distributed team environments.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 – July 2024*
- Engineered cross-platform data-sharing software with a microservice architecture, supporting scalable service communication, distributed validation workflows, and maintainable backend components across Windows, Linux, and macOS production environments reliably.
- Maintained 20+ automated tests and CI pipelines with Jenkins, PyTest, and Mockito, increasing release reliability by 68% while improving debugging, deployment consistency, and defect tracking across distributed builds.
- Executed multi-platform build and validation workflows across Windows, Linux, and macOS, surfacing defects earlier, verifying service behavior consistently, and supporting repeatable releases for operational software components teams.

LST Capitals **India**
Web Developer Intern *May 2022 – August 2022*
- Built backend APIs for a cross-platform service-booking application covering reservations, time-slot selection, and payment status workflows across 50K+ booking records, emphasizing reliable operational behavior and maintainable interfaces.
- Designed the system architecture and mapped 12+ backend integration points, collaborating with stakeholders to align requirements before implementation and support iterative improvements across mobile and web software surfaces.

Skills

Languages: Python, JavaScript, TypeScript, SQL, Java, C++, Bash
Frontend: React, Next.js, HTML, CSS, TailwindCSS, responsive UI, state management
Backend & APIs: Flask, FastAPI, Node.js, Express, REST APIs, WebSockets, microservices
Testing & DevOps: PyTest, Mockito, unit testing, integration testing, Git, GitHub, GitHub Actions, Jenkins, Docker, CI/CD
Platforms: Linux, Windows, macOS, Android familiarity, cross-platform development, CLI tooling, debugging, OOP, data structures, algorithms

Projects

Selected Projects | *C++, MERN, TypeScript, Python*
- Implemented FCFS, SJF, SRT, RR, priority scheduling, and MLQ with C++ logic, dynamic metrics, and Gantt visualization across 1K+ simulated process combinations for repeatable operating-systems experimentation analysis.
- Implemented consent-based patient-history access, Twilio appointment alerts, Sentry monitoring, and scalable TypeScript-backed workflows to reduce administrative workload by 30%, emphasizing reliable state transitions and operational systems visibility.
- Built a scalable fintech platform supporting 50,000+ users and 1M+ transactions, combining real-time updates, secure APIs, and deployment automation to maintain responsive behavior under high-volume workloads reliably.
