Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahajbhadja sahaj-bhadja

Summary

Full-stack software engineer with 2+ years building **React/TypeScript interfaces**, **Python backend services**, and **AI-enabled data workflows** with strong ownership across implementation, testing, deployment, and cross-functional product collaboration.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Data Structures, Operating Systems, Software Engineering, Object-Oriented Programming

Experience

USC Dornsife **LA, California**
Software Engineer *September 2025 - Present*
- Built **full-stack platform services** for 500+ users, reducing latency from **1.2s to 350ms** by optimizing backend execution paths, refining SQL interactions, and improving responsiveness in data-intensive production workflows.
- Implemented **automated validation pipelines** for 5,000+ monthly jobs, improving execution reliability, reducing downstream failures, and strengthening release confidence through earlier detection of data-quality and workflow-regression issues across teams.

Grad8 **LA, California**
Software Engineer Intern *June 2025 - August 2025*
- Developed **full-stack features and APIs** handling 10,000+ daily requests, translating requirements into maintainable backend services and responsive web interfaces while improving sprint delivery predictability through clearer implementation sequencing and ownership boundaries.
- Improved **release velocity** through CI/CD automation and structured defect triage, reducing turnaround by **60%**, lowering manual QA friction, and enabling safer production rollouts across parallel product and engineering workstreams.

USC AD Labs **Los Angeles, CA**
ML Research Assistant *January 2025 - May 2025*
- Built **large-scale experimentation pipelines** across 100,000+ trajectory records, enabling reproducible algorithm evaluation and high-confidence benchmarking that accelerated iteration speed for research collaborators building model-driven decision systems and analysis tooling.
- Produced **technical reports and test scenarios** translating findings into implementation guidance, improving cross-team alignment, reducing handoff ambiguity, and strengthening execution quality as experimental prototypes advanced toward production-grade engineering standards.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 - July 2024*
- Engineered **API and ETL microservices** using AWS Glue and S3, improving response time by **30%** while supporting distributed integrations, resilient data movement, and reliable delivery across production-scale enterprise workloads.
- Maintained **20+ automated test suites** using Jenkins, PyTest, and Mockito, increasing CI reliability by **68%**, reducing regressions, and improving developer confidence in frequent releases across coordinated service components.

Aasma Technology Solutions **India**
Full Stack Developer Intern - (VibrantChem) *May 2023 - August 2023*
- Developed **MERN and WebSocket modules** for 2M+ synchronized records across eight workflows, improving throughput consistency, reducing stale-session behavior, and strengthening real-time operational responsiveness for high-volume event-driven user-facing processes.
- Automated **Docker-based build and test flows** with Jenkins, cutting release time by **50%**, improving deployment consistency, and reducing environment drift that previously slowed validation, troubleshooting, and cross-team handoffs.

Skills

Languages: **Python**, **TypeScript**, JavaScript, SQL, Java, C++, Bash
Frontend: React, reusable component development, UI state management, responsive interface implementation
Backend & Platform: REST APIs, microservice-style architecture, ETL pipelines, distributed service integrations
Infra & Tooling: Docker, Kubernetes fundamentals, Jenkins, CI/CD, Git/GitHub, Linux/UNIX workflows
Engineering: Agile/Scrum execution, cross-functional collaboration, technical documentation, production debugging

Projects

Linguistix Code | *Python, AWS, Docker, CI/CD*
- Built a **containerized REST processing API** on AWS CodePipeline and ECS/Fargate with automated validation gates, improving production reliability, reducing deployment variance, and enabling safer iteration across operationally sensitive data-processing workloads.

Chat2SQL Code | *Java, TypeScript, SQL, Docker*
- Developed a **schema-aware query assistant** spanning 10+ datasets with explainable outputs and validation checks, improving analyst speed on ad-hoc tasks while reducing malformed SQL generation and repetitive troubleshooting during exploratory analysis.

CaptionCraft Code | *Python, FastAPI, React, LLM*
- Implemented an **LLM-assisted captioning workflow** with evaluation hooks and configurable prompts, improving iteration speed for user-facing generation features while strengthening observability of output quality across rapid product experimentation loops.
