Hiring Team
Revley.ai

**Application: Full-Stack AI Engineer**

Dear Revley Hiring Team,

I am applying for the Full-Stack AI Engineer role at Revley. I recently completed my MS in Computer Science at USC and bring experience shipping AI workflows, full-stack applications, and payment integrations. Revley's approach to merchant-owned payment infrastructure appeals to me because it gives agents the context and execution capabilities to complete useful commerce workflows. I would be excited to help build that connection between AI applications and reliable payments.

At USC Dornsife, I restructured production LLM orchestration using background workers, explicit job-state transitions, and failure isolation. The system processed more than 1,000 AI jobs at three times the throughput without cascading failures under concurrent load. I also designed PostgreSQL and Supabase data models with row-level security for more than 500 users, reduced dashboard latency from 1.2 seconds to 350 milliseconds, and ran reconciled integrations at over 99% reliability. This work taught me to assess an AI feature across its execution path, including data access, job completion, and recovery.

At Grad8, I shipped an AI workflow connecting rubric generation, vision OCR, and grading with structured outputs across multiple model providers. I built provider routing with automatic fallbacks, timeout handling, and per-call token and cost logging. We measured over 90% grading consistency and reduced instructor feedback turnaround by 60%. These experiences align with Revley's emphasis on empirical evaluation and production observability.

My payments experience includes multi-currency infrastructure at LST Capitals, where I built idempotent webhooks for refunds, disputes, and chargebacks, reducing manual refund handling by about 70%. My projects extend that work: a NestJS payment router uses a strategy pattern across Stripe and Adyen, while a merchant operations agent exposes tenant-scoped MCP tools with approval for money movement and audit logs. Alongside my TypeScript, Next.js, Node.js, and PostgreSQL experience, these projects prepare me to contribute across Revley's AI and payments stack.

I would welcome the opportunity to own a feature from design through deployment and learn through close collaboration with your engineering team. Thank you for considering my application.

Sincerely,
**Sahaj Bhadja**
