Sahaj Bhadja

(213) 284-4651 bhadja@usc.edu sahaj-bhadja sahajbhadja sahaj-bhadja

Summary

Entry-level software engineer pursuing an MSCS with strong **C++**, algorithms, systems, testing, and backend experience; interested in high-performance trading systems where speed, reliability, and clean design matter.

Education

University of Southern California, Los Angeles, CA **August 2024 – May 2026**
Master of Science in Computer Science *GPA: 3.75/4*
Coursework: Analysis of Algorithms, Database Systems, Web Technologies, Advanced NLP

Pandit Deendayal Energy University, Gandhinagar, India **November 2020 – May 2024**
Bachelor of Technology in Computer Science and Engineering *GPA: 3.88/4*
Coursework: Software Engineering, Operating Systems, Object-Oriented Programming, Data Retrieval

Experience

USC Dornsife **Los Angeles, CA**
Software Engineer *September 2025 – Present*
- Built **Python-backed platform workflows** for 500+ users, translating requirements into APIs, validation logic, monitored jobs, technical documentation, release notes, and maintainable delivery through reviewed changes and support runbooks.
- Improved **service performance and reliability** by tuning indexed queries, background jobs, and CI/CD releases, reducing dashboard latency from **1.2s to 350ms** with traceable production handoffs and profiling notes.

Grad8 **Los Angeles, CA**
Software Engineer Intern *June 2025 – August 2025*
- Developed **Python and JavaScript services** handling 10,000+ daily requests, implementing REST APIs, file ingestion, responsive interfaces, automated checks, documented fixes, and sprint-ready production workflows with code review.
- Supported **root-cause testing workflows** by reproducing OCR, persistence, and execution defects, documenting regression cases, reviewing fixes, and cutting instructor feedback turnaround by **60%** across validation cycles and QA notes.

USC AD Labs **Los Angeles, CA**
ML Research Assistant *January 2025 – May 2025*
- Created **algorithm evaluation pipelines** across 100,000+ records, producing reproducible metrics, logs, reports, and review artifacts for debugging model behavior and validating decision workflows under experiment constraints.
- Documented **edge cases and performance behavior** for researchers, turning ad hoc experiments into repeatable test scenarios with traceable outputs, clearer handoffs, and reviewable conclusions for implementation planning.

Aasma Technology Solutions **India**
Software Developer Engineer - (SecureSync) *August 2023 – July 2024*
- Engineered **cross-platform services and ETL workflows** using Python, SQL, AWS Glue, and S3, improving response time by **30%** across integrations, releases, reviews, and handoffs for distributed users.
- Maintained **20+ automated test suites** using Jenkins, PyTest, and Mockito across validation flows, increasing CI reliability by **68%** and reducing release regressions during coordinated deployments and reviews.

Aasma Technology Solutions **India**
Full Stack Developer Intern - (VibrantChem) *May 2023 – August 2023*
- Built **real-time application modules** with REST APIs, WebSockets, and SQL/NoSQL persistence, supporting 2M+ synchronized records across dashboards, workflows, integrations, code reviews, releases, support needs, and runtime logs.
- Automated **Docker-based build and test flows** with Jenkins, cutting release time by **50%** while improving deployment consistency, troubleshooting documentation, and shared-environment handoffs across staging workflows and releases.

Skills

Languages:	C++, Python, Java, JavaScript, TypeScript, SQL, Bash, C familiarity, modern C++ interest
Systems:	data structures, algorithms, OOP, Linux CLI, multithreading concepts, performance profiling, real-time systems
Backend:	REST APIs, Flask, FastAPI, Node.js, service design, WebSockets, root-cause debugging, production support
Trading Fit:	low-latency curiosity, market data interest, reliability, profiling, troubleshooting, trader-facing collaboration
Tools:	Git, GitHub, pull requests, code review, Docker, Jenkins, CI/CD, automated tests, SQL tuning

Projects

CPU Scheduling Simulator Live | *C++, React.js, JavaScript*
- Implemented **FCFS, SJF, SRT, RR, priority, and MLQ scheduling** with metric calculation and visualization, strengthening C++ fundamentals, algorithmic reasoning, debugging discipline, correctness testing, runtime analysis, and profiling.

Chat2SQL Code | *Java, TypeScript, SQL, Docker*
- Built an **AI-powered SQL workspace** supporting 10+ databases, accelerating query authoring, schema exploration, and database management through Java services and TypeScript interfaces with Docker workflows and Git collaboration.

Linguistix Code | *Python, AWS, Docker, CI/CD*
- Developed a **containerized REST processing API** with AWS deployment, CI/CD releases, validation checks, and reproducible execution, achieving **87%** classification accuracy with diagnostic reporting, tests, logs, and reviews.
