Dear Waymark Hiring Team,

I am excited to apply for the Junior Software Engineer role at Waymark. Your mission to bring technology-enabled care to people with Medicaid benefits strongly resonates with me, and my background combines software engineering, healthcare-focused projects, React/TypeScript development, PostgreSQL-backed APIs, testing, CI/CD, and production support.

I am currently completing my M.S. in Computer Science at the University of Southern California and have 2+ years of experience building web and healthcare products. In my Software Engineer role at USC Dornsife, I built PostgreSQL-backed workflows for 500+ users, translated stakeholder requests into APIs and schemas, and improved dashboard latency from 1.2 seconds to 350 milliseconds through query tuning, background jobs, and reliable CI/CD releases. At Grad8, I developed React and backend APIs handling 10,000+ daily requests, worked directly with users to reproduce production issues, documented regression cases, and helped reduce feedback turnaround by 60%.

Waymark's role is especially compelling because it offers the chance to ship meaningful features from day one while learning from senior engineers. I have hands-on experience with React, TypeScript, REST APIs, Git/GitHub workflows, PostgreSQL, Docker, Jenkins, Jira-style Agile development, code reviews, automated tests, and bug triage. While I have not yet worked professionally with Elixir, I am confident in my ability to ramp quickly because I have repeatedly learned new stacks across internships, research, and production-style engineering work, including Python, JavaScript/TypeScript, Java, SQL, AWS, and AI-assisted workflows.

I would bring focused urgency, humility, and curiosity to Waymark. I enjoy asking clear questions, breaking down ambiguous problems, writing maintainable code, and improving through feedback. Most importantly, I want my engineering work to support real people and real care teams, which makes Waymark's mission deeply motivating to me.

Thank you for your time and consideration. I would be grateful for the opportunity to discuss how my experience and learning mindset can contribute to Waymark's engineering team.

Sincerely,

Sahaj Bhadja
