Sahaj Bhavesh Bhadja

Associate Forward Deployed AI Engineer | Coforge

Dear Coforge Hiring Team,

I'm excited to apply for the Associate Forward Deployed AI Engineer role. I recently completed my MS in Computer Science at USC, and I'm drawn to the opportunity to work directly with clients and turn unclear business problems into useful, production-ready AI systems.

At USC, I helped build GENAI-ED, an AI platform using Next.js, FastAPI, and Supabase that supports approximately 350 daily users and more than 5,000 monthly jobs. My work included integrating multiple LLM providers, developing orchestration and evaluation endpoints, and reducing dashboard latency from 1.2 seconds to 350 milliseconds. This experience taught me to look beyond model outputs and focus on reliability, performance, and the user's workflow.

I also bring experience building backend services, cloud data pipelines, and CI/CD workflows at Aasma Technology Solutions and Grad8. Alongside that engineering work, my research at USC's AutoDrive Lab explored offline reinforcement learning using Decision Transformers. I use AI coding tools such as Cursor to support development while staying accountable for the code and design decisions.

Coforge's combination of hands-on client delivery, mentorship from senior FDEs, and exposure to different industries is especially appealing to me. I'd welcome the opportunity to contribute my full-stack and applied AI experience while learning to deliver systems with measurable business value.

Thank you for considering my application.

Sincerely,
Sahaj Bhavesh Bhadja
